ABOUT ME

I'm Dave Stevens. I design and build web and mobile applications that help companies, both large and small, achieve their goals.

Over the years I've had the privilege of working with several creative and successful teams. I have learned that the secret to keeping up to date on new technology is embodied in one simple statement, "never stop coding." Why? Because the day I stop coding is the day I stop learning new things. And discovery and craftsmanship are what excites me the most about the field of information technology.

FAVORITE TOOLS / SKILLS

- **Javascript / HTML / Sass** - can't be a UI expert without a good foundation in these
- **Knockout** - I turn to knockout for smaller multi-page apps. Observables are awesome!
- **Angular 2** - Angular is great for larger web applications that load as a single page.
- **RequireJS** - This is how I make my Javascript object oriented.
- **Node.js** - I enjoy coding the backend in Javascript also
- **Bootstrap 3** - Great responsive framework for quick sites.
- **Bourbon Neat** - I prefer Neat for making custom designs responsive. Ask me why.
- **Gulp** - I'm addicted to using Gulp for compiling Sass, Uglifying javascript, compiling SVG sprites, etc.

EXPERIENCE TIMELINE

1991

Principal

Des Moines, Iowa

Roles:

- 1991-1994 Client Server Developer
- 1995-1999 Data Warehousing Developer / Architect
- 2000-2009 Java Web Application Developer
